CANADA - METEOROLOGICAL BRANCH - DEPARTMENT OF TRANSPORT

MONTHLY WEATHER MAP

JUNE 1959

General Summary of Weather Conditions

There were no very large departures from seasonal temperatures across Canada in June. The Atlantic Provinces and the Northwest Territories averaged two to four degrees below seasonal values, and Labrador, Ontario, southern Manitoba and southern Saskatchewan two to four degrees above. Precipitation showed wider variations from the normal, with the Maritime Provinces, Quebec, southern Saskatchewan and coastal British Columbia much wetter than usual, while Ontario continued to suffer from the drought visible in the previous month.

While rainfall amounts were generally near normal in Newfoundland in June, it was a cool and dreary month on the Island, with temperatures about four degrees below normal at St. John's and Gander. Torbay Airport reported the coldest June in eighteen years of records. In the period 8th to 10th, the Island had five to eight inches of snow. The weather was markedly better along the west coast of the Island, and in Labrador, temperatures averaged two to four degrees above the seasonal normal.

June was a very cool, wet, dull month in the Maritime Provinces - one of the cloudiest and wettiest on record in Nova Scotia. Temperatures were everywhere below normal. The deficiency was the result of the cool cloudy days, with low afternoon temperatures. There were frosts in the first few nights of the month. Northern New Brunswick reported precipitation about a third below normal, and western Prince Edward Island had about normal falls. In southern New Brunswick and throughout Nova Scotia, precipitation was generally heavy, with many stations reporting two or even three times the usual June falls. Several stations in southern Nova Scotia reported the wettest June on record, with falls of eight to ten inches.

Storms occurred the first three days of the month and again throughout the period from the 13th to the 21st. A particularly vicious storm struck the Maritimes on the night of June 19th-20th,with very strong winds for the time of year. The storm caught a fleet of small fishing boats in the Northumberland Strait area, and loss of life was heavy.

June was a dull month in most of the Province of Quebec. Temperatures averaged near normal, although there were wide fluctuations from cool to very warm weather. Precipitation was above normal, except in the extreme west. There were heavy rains along the St. Lawrence Valley from Quebec to Seven Islands, and in southeastern Quebec. In the latter area, there was much loss of property because of floods. Western Quebec, to the north of the Ottawa River, however,had precipitation about seventy per cent of normal.

In Ontario, June 1959 was warm and dry. Temperatures averaged one to three degrees above seasonal values. There were two notable warm spells, from the 8th to the 10th,and from the 26th to the 29th. Ottawa Airport reported 95°F. on the 29th, equalling the warmest June temperature on record there. A cold front dropped temperatures sharply across the province at the end of the month, and on June 30th light frosts occurred near Lakehead.

Precipitation was deficient almost everywhere in Ontario in June, with most places reporting falls from twenty to fifty per cent of normal. The drought was particularly noticeable in the southwest, with amounts generally totalling less than an inch. Only Sudbury, Sault Ste. Marie, and Woodstock reported local excesses. The precipitation was for the most part of a thundery character, and on 12th June Woodstock reported hailstones the size of golf balls. In the extreme north of the province, however, precipitation was heavy, with Moosonee reporting 5.3 inches of rain and Winisk 9.0 inches.

June temperatures in the Prairie Provinces averaged two to four degrees above normal in southern Manitoba and southern Saskatchewan, and near seasonal values elsewhere. The early part of the month was warm,and temperatures reached 95 along the Red River, but cooler weather later brought the average down.

The pattern of rainfall in the Prairie Provinces was rather complex. In general, Manitoba was rather dry, with falls about half normal along the Assiniboine River. Midway in the second week, six to seven inches of rain fell in the southeastern corner of the province, causing flooding along the Seine River. In the last week of the month, much needed rain fell in southern Saskatchewan, and most stations in that area reported total falls for the month forty to over a hundred per cent above the long-term average. In Alberta, much of the precipitation was of a showery character, and there were spotty local excesses and deficiencies, with the average near normal.

Temperatures in British Columbia in June averaged near seasonal values, although there were two-degree deficiencies northward from the Okanagan Valley and in the northeastern quarter of the province.

Storm tracks affecting British Columbia in June lay mainly to the north in the early part of the month, and to the south of the area later.

Precipitation was excessive along the Pacific Coast, with surpluses of fifty to a hundred per cent. Both Vancouver and Victoria reported more than twice the usual June rainfall. The interior was on the whole rather dry. There were deficiencies of about fifty per cent along the upper Fraser Valley. In the southeast, departures from normal varied from fifty per cent excess, with deficiencies predominating.

June temperatures were seasonal in the Yukon, and precipitation averaged about half the normal June amount.

The Northwest Territories were rather cool for June, particularly in areas near Great Slave and Great Bear Lake. Precipitation was generally deficient throughout Mackenzie and Franklin, averaging well below half the usual amounts. An exception was at Cambridge Bay, which had twice the normal fall. Falls were above normal also in the District of Keewatin and at Frobisher Bay, with most stations in the area reporting over twice the normal amounts.

AUG 25 1959
WEATHER BUREAU

JUNE 1959

TEMPERATURE, PRECIPITATION AND SUNSHINE

The temperatures for the month are given in degrees Fahrenheit in the temperature columns under the following headings:
MAX. The highest temperature.
MIN. The lowest temperature.
MEAN The mean temperature for the month.
The remaining columns give the following information:
PRECIP. The total precipitation in inches for the month including the rainfall and the equivalent of the snowfall.
SUN The total hours of bright sunshine for the month.
SNOW ON GRND. The depth of snow in inches lying on the ground at the end of the month (when reported).
The use of A following the station name indicates that the meteorological observations are taken at Airport offices.
